---

### **PRODUCT DESCRIPTION**

**Liquid Release** is a highly purified aliphatic liquid release agent with high flash point and slower evaporation to allow for more open time, less labor, and much safer handling in interior areas. Apply **Liquid Release** with a pump-up sprayer. Apply at the rate of 200 square feet per gallon for concrete and 175 square feet per gallon for polymer overlays.

### **BENEFITS**

- **With a flash point over 140 degrees F:** **Liquid Release** is much safer to handle and to store, and it is much safer to work with because it contains no hazardous aromatic solvents.
- **Controlled evaporation:** With a slower evaporation rate, there is more open time. Much less time wasted re-spraying forms or re-working areas because stamps dry out and stick.
- **Transparent:** The clear, colorless release will not stain concrete or forms.
- **Totally volatile:** **Liquid Release** is 100% volatile. Nothing is left behind to stain or affect the surface of the finished concrete. Forms dry clean and ready to use again.

### **HOW TO USE**

1. Spray the tools. Usually one coat on the stamps every couple times they are used is sufficient.
2. Allow the floor to stand open for several hours for the **Liquid Release** to evaporate.

### **PROPERTIES**

**Type:** Solvent release agent.

**Color:** Clear

**Odor:** Bubble Gum

**Toxicity:** Low

**Flammability:** Combustible

**Composition:** Highly Hydro-refined aliphatic solvent release agents
