**PRODUCT DESCRIPTION**

**Satin / Matte Additive** is a finely graded additive for sealers and coatings that will impart gloss control and leave a Satin or a Matte finish. This product will stay suspended in solution without continuous stirring. Satin / Matte Additive can be used in most sealers and coatings where a semi-gloss (Satin) or matte finish is desired. It can be used indoors or outdoors. This material helps to impart non-slip properties, and can also be used in conjunction with Skid-Resistance Additive if desired. This product only need be applied with the last top (finishing) coat.

**APPLICATION**

- Mix sealer or coating to proper consistency if needed. Add prescribed amount of Satin / Matte Additive and remix until properly dispersed. This is an ultra-fine powder and will require a good mixing to incorporate the material. Add slowly to the sealer or coating while stirring / mixing for best results. Apply sealer or coating as directed without over rolling. This product is fine enough that it can also be used in spray applications.

**COVERAGE / USE**

Satin / Matte Additive is added at one pound per five-gallons of sealer or 8 oz. per one-gallon of sealer for a **Satin finish**. For a **Matte finish**, add 2 pounds per five-gallon of sealer or 16 oz. per one-gallon of sealer.
